

# YouBet ZK Git

Prove Your GitHub Private Repo Contributions—Without  
Revealing Who You Are.

YouBet Dao

**Anonymous**

**A Service to Publicly Verify Private Repo Contributions**

# Why Developers Benefit

- Prove your contributions without revealing your identity.
- Turn your code contributions into recognized assets.
- Participate in private repos safely, without exposing personal info.

# Why anonymously

Keep your identity private.

Avoid government tracking of your contributions.

Contribute to projects your boss may not approve.

# Safe Contributions

Anonymity is essential for developers' safety and freedom.

# How to solve it

1. Developers upload git cat-file commit records to our service.
2. The service generates a ZK proof based on the commit hash and the contributor's public key, without revealing identity or email.
3. Verifiers can confirm the authenticity of the commit by verifying the ZK proof, ensuring that the commit was made by the contributor without accessing any personal information.

# YouBet Task

**Reward every effort.**
